

ACHIEVING THE FUTURE

# TALLINN SCIENCE PARK TEHNOPOL

Piret Hirv  
Connected Health Cluster  
Manager of the health technology division

Estonian HealthTech Cluster

The Connected Health Cluster led by Tehnopol Science and Business Park connects you with the Estonian health innovation ecosystem – we help you to find information or partners, so you can take advantage of the unique environment Estonia offers.

Connected Health brings together 55 partners, including companies (start-ups, health IT, medtech, biotech and pharma), R&D institutions (universities and technology competence centres), health and care service providers (hospitals, GPs, occupational health), patient organizations and user communities, and the public sector (ministries responsible for healthcare and entrepreneurship, Health Insurance Fund, and the National Institute for Health Development).

The cluster is part of the European Connected Health Alliance, ScanBalt network and Cluster Collaboration Platform.

# KEY PRIORITIES

## ➤ NEW SERVICES AND PRODUCTS

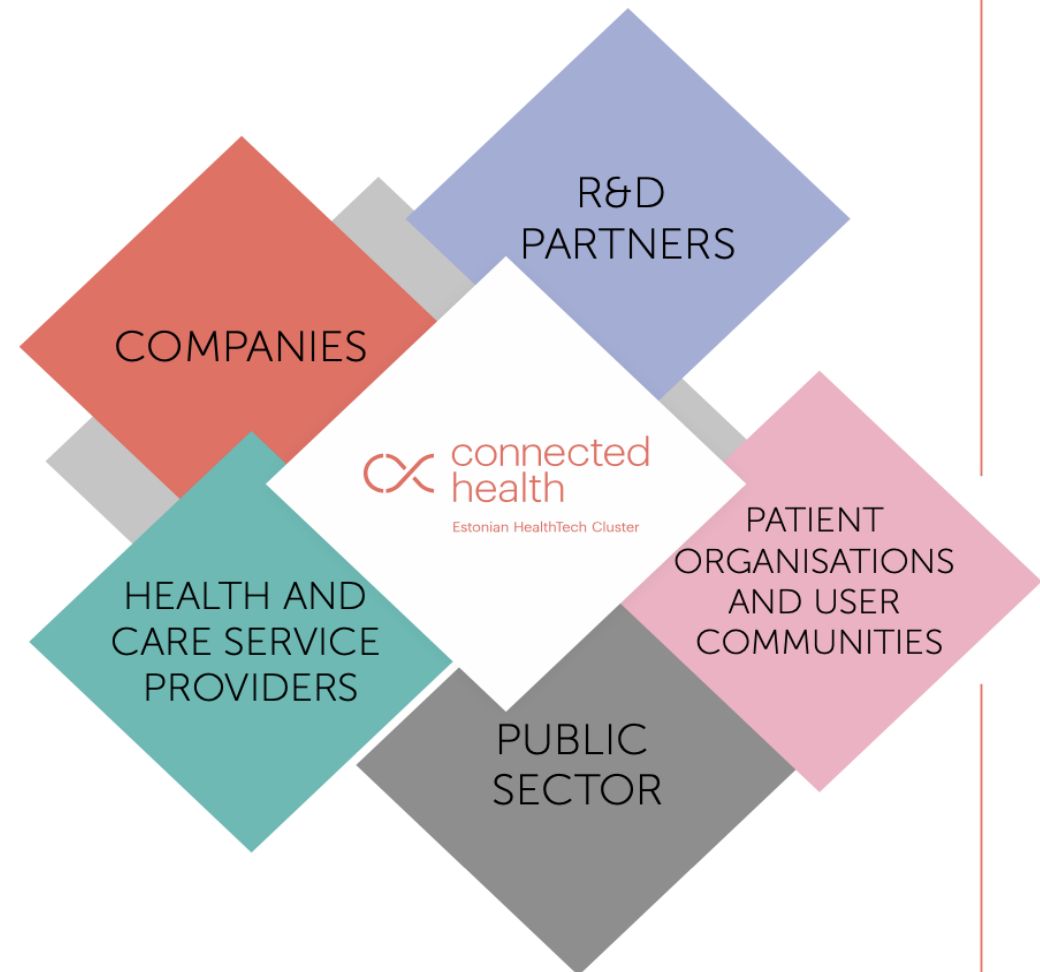

By bringing together different stakeholders in healthcare, Connected Health Cluster creates new services and products that solve problems related to healthcare. To ensure success, solutions can be tested both in Estonia and in foreign markets with the help of the cluster.

## ➤ INTERNATIONALIZATION

For our companies to achieve recognition and to expand to new markets, Connected Health is devoted to joint marketing activities and participation in events, which increases the visibility of the products and services of the partners, as well as the Estonian health ecosystem in general.

## ➤ FINANCES

Connected Health helps to realize innovative ideas by co-financing, offering information about relevant financial schemes, directing them to potential investments, or finding them a suitable accelerator program either in Estonia or abroad.

Connected Health helps companies to expand to new markets, assists in creating new enterprises, and works to establish a favourable environment for health technology companies in Estonia. The primary strength of our ecosystem is the community behind it. Connected Health Cluster unites the most innovative enterprises and stakeholders who support each other and exchange experiences with one another.

Estonia is the best place for entrepreneurship in the field of health technology.
